

# Proudly celebrating 50 years of newborn screening

# Participating in newborn screening CAN SAVE YOUR BABY'S LIFE.

Newborn screening can identify certain genetic and metabolic disorders, and Illinois has expanded the panel to include even more conditions this year.

Your healthcare provider will be notified if your baby needs follow-up testing.

Before you leave the hospital, make sure your address and telephone number are correct, so you can be contacted with any results that warrant follow-up.

If your baby is diagnosed with a condition, it is important to follow up with recommendations.

**EARLY INTERVENTION IS CRITICAL.**

**DNA DAY** APRIL 25  
**14**
